

Chinquapin ^[1]

Chinquapin

by David Southern, 2006

Chinquapin with unripe husks.

Image from Flickr user Lydiat. ^[2]Chinquapin, or "chinkapin," is a diminutive cousin of the American chestnut. Although their name derives from eastern-dwelling Algonquian Indian ^[3] language, chinquapin trees are known as far west as Texas, and several species exist. In North Carolina the principal chinquapin tree, *Castanea pumila* ^[4], occurs in the Piedmont and Mountain regions. Small and shrublike in nature and often with several trunks, a chinquapin seldom grows above 20 to 30 feet in height. The wood of chestnuts and chinquapins is extremely rot resistant and has been used in making railroad ^[5] ties and posts and rails for fences ^[6]. The occasional split-rail zigzag fences along the Blue Ridge Parkway ^[7] are fashioned mostly from these trees.

Chinquapin husks contain a single kernel that, when ripe in the fall, is a tasty foodstuff for humans as well as animals. Kemp P. Battle, the president of the University of North Carolina ^[8] from 1876 to 1891, remarked that there were two local delicacies that students dependably would raid: scuppernong grapes ^[9] and chinquapins. In his day a convenient grove of chinquapins stood near the intersection of Columbia and Franklin Streets, main corners of modern-day Chapel Hill. In the early 1950s it was possible to buy a bag of chinquapins at roadside stands in hilly, rural North Carolina counties such as Stokes ^[10] and Surry ^[11]. The bag was approximately the same size as a bag of peanuts sold at a ball game and usually cost a nickel. At the end of the decade the price had increased to a quarter a bag, if one could find them for sale at all.
