Fort San Juan

Finding a Lost Spanish Fort (North Carolina's Real First Colony)

by Dr. David G. Moore, Tar Heel Junior Historian Association, NC Museum of History, Fall 2007; Revised by SLNC Government and Heritage Library, May 2023

Reprinted with permission from the *Tar Heel Junior Historian*.

Few North Carolinians know the story of the first European settlement in North Carolina. Most people are surprised that it wasn't the Lost Colony of [Roanoke Island](#) ^[2] but a small Spanish fort located in present-day [Burke County](#) ^[3] near [Morganton](#) ^[4].

[Captain Juan Pardo](#) ^[5] built Fort San Juan in 1567 at the Native town of Joara. American Indian soldiers burned the fort the next year, and its location was forgotten for more than four hundred years. Archaeologists working at what is called the [Berry site](#) ^[6]—the site is named for the property owners—in Burke County believe that they have rediscovered Joara and found remains of buildings that may have been part of the fort. The fascinating story of Fort San Juan reveals the challenges to early European efforts at colonizing what is now the United States. It also shows the tragic effects that these attempts had on [American Indians](#) ^[7] tribes and their people.

In the fifty years after Columbus's arrival in the [Caribbean](#) ^[8], many Spanish expeditions pushed along the Atlantic and Gulf coasts and into the interior of what is now the southeastern United States. Spain hoped to discover a passage to the Pacific Ocean, as well as to exploit the land, the people, and its resources. The Spanish viewed the American Indian people as new subjects to be used and hoped they would lead them to gold and silver. Spanish conquests of Native societies in Mexico and South America had made the royal court very wealthy. However, over five decades, a series of failed attempts at exploration and colonization discovered no gold or silver. And settlement of North America would turn out to be more difficult than imagined.

Hernando de Soto (1791). Library of Congress and Claude Pepper.

was the first to try and settle a colony in North America. Soon after landing on the southwest coast of Florida^[11], his expedition was routed by American Indian tribes. De Leon and his 200 colonists retreated to Cuba. Five years later, Lucas Vasquez de Ayllón^[12] made another attempt, with 600 colonists, to establish the first European settlement in North America, probably somewhere along the coasts of South Carolina or Georgia in September 1526. This site, called San Miguel de Gualdape^[13], has never been located. It was abandoned within a few months, after the colonists were unable to get food and began to starve. Internal mutiny and attacks by threatened American Indian tribes also disrupted the colony. Ayllón was among the many that died. Only 150 of those colonists survived to return to the Spanish colony on Santo Domingo^[14].

^[9]For example, in 1521 Juan Ponce de Leon^[10]

Hernando de Soto's^[9] expedition of 1539 to 1543 was the most ambitious of the efforts— and the greatest failure. De Soto and an army of more than 600 men (with more than two hundred horses) spent four years traveling through much of the Southeast, from Florida to the southern Appalachians^[15] in North Carolina and west beyond the Mississippi River. However, the men found no gold or silver. They also abused many American Indian tribes; they often confiscated their food or enslaved their people. As a result, the tribes retaliated against De Soto's men and attacked them frequently. De Soto died on the banks of the Mississippi, and at the end of the four years, what was left of his army (just over 300 men) retreated down the Mississippi in a makeshift flotilla.

Other attempts at settlement failed too. It was not until 1565 that Pedro Menéndez de Avilés^[16] founded Saint Augustine^[17] on Florida's Atlantic coast. Menéndez planned to colonize all of the territory that the Spanish called La Florida^[18], the land we know as North America. He knew that the French had built a fort nearby at the mouth of the Saint Johns River^[19], in present-day Florida. The Spanish believed that this French presence threatened their plans, so Menéndez attacked and defeated the French there at Fort Caroline^[20]. He then sent men north to establish his capital city, Santa Elena^[21], in Port Royal Sound^[22] on what is now the South Carolina coast.

Archaeologists working at Santa Elena—on the site of present-day Parris Island—have identified the remains of two forts associated with the town. The first was called Fort San Salvador^[23]. Some Spanish soldiers, unhappy with conditions there, mutinied, stole a ship, and returned to Cuba. Less than 40 soldiers remained at Santa Elena, short of food and arms, when Captain Juan Pardo arrived on July 18, 1566, with 250 men. Pardo and his soldiers built the second fort at Santa Elena, Fort San Felipe^[23].

Governor Menéndez himself arrived at Santa Elena in August, and the town formally became the capital of Spain's colony. Supplies were limited at Santa Elena. Menéndez ordered Captain Pardo to take 125 soldiers and build a road to Mexico to help ease supply demands on the town. At this time, although the Spanish had thoroughly mapped the Atlantic and Gulf coasts, they did not understand just how far it was overland from the Atlantic Ocean to Mexico. Based on the reports of the de Soto and Francisco Vázquez de Coronado ^[24] expeditions, they mistakenly thought that the eastern Appalachians and the western Rockies were parts of the same mountain chain!

Several documents record Pardo's two expeditions. (The first lasted from December 1, 1566, to March 7, 1567, and the second, from September 1, 1567, to March 2, 1568.) These include a short letter written by Pardo himself and a longer account written by the expedition's scribe, Juan de la Bandera ^[25]. These and other sources tell us that Pardo followed trails created by American Indian tribes north from Santa Elena into North Carolina. Stopping at a succession of American Indian towns, he briefly traded with the chiefs (also identified as "Micos")—and told them they were now subjects of the king of Spain. The documents usually list what types of items the Spanish gave to the people of the various towns: iron axes, chisels, wedges, or knives, glass beads and ornaments, and cloth. It is unlikely that the Native tribes understood Pardo's mission, or their new status with the Spanish crown. But they seemed to receive Pardo and his men peacefully, for the most part.

Traveling up the Catawba River ^[26] valley, Pardo reached the town of Joara in early January 1567. This seems to have been the largest and possibly most powerful of the Native towns in North Carolina's western Piedmont. Joara also may have controlled important trading paths from the Piedmont into the mountains. Here, Pardo built his first fort, Fort San Juan, named after himself and because the Spanish arrived there on the Day of San Juan. (He renamed the American Indian town, Cuenca, after his hometown in Spain.) Thus, Pardo established the first European settlement in North Carolina. (We have no evidence that earlier expeditions into the interior built any intentional settlement. They only used American Indian settlements and scavenged from them for short times.)

Seeing the snow-covered Blue Ridge Mountains to the west, Pardo decided to go back to Santa Elena. He planned to return and make his way west (towards Mexico, he thought) in the spring. He left 30 men stationed at Fort San Juan under the leadership of Sergeant Hernando Moyano. Pardo stopped at several American Indian towns on his way to Santa Elena. The Spanish documents tell us that over the next few months, the Joara Mico and Moyano fought a series of campaigns in upper Appalachia against various other tribes that may have been enemies of the Joara. The motivations for the campaigns are unclear. They attacked tribes and villages identified as "Chisca," "Maniatique" and "Guapere." Maniatique ^[27] was located near present-day Saltville, Virginia. Guapere was likely located in present-day east Tennessee. Moyano, the Joara Mico, and the soldiers remained in East Tennessee after Guapere. They arrived at the town of Chiaha and soon the company departed for the next tribe's town. At the Olamico tribe's town, Moyano's team built a fort and waited for Pardo to return. The aggressive behavior of Moyano and his team angered the area's American Indian tribes. Spanish accounts document that the Native people surrounded Moyano and his group, "put them under siege," and held them hostage until Pardo returned in the spring to save them.

Helmet worn by Spanish explorers. From NC Department of Cultural Resources.

^[28] Pardo then decided that the original plan to establish a road to the west was too hazardous and retreated to Fort San Juan. Again, we learn interesting tidbits about the American Indians from the Spanish documents. According to Bandera's account, Pardo met with more than twenty-four chiefs (probably representing as many towns) at Joara, and Joara Mico was the most powerful. The chiefs' names also reflect different American Indian languages. Based on phonology, or word sounds, the chiefs named Tocaé, Atuqui, and Guanbuca were probably Cherokee ^[29] speakers, for example. *Guenpuret* and *Qunaha* may have been Catawban.

Pardo went back to Santa Elena in March 1568. He left a total of 120 men stationed in five small forts (one in east Tennessee, two more in North Carolina, and two in South Carolina). Pardo never returned to his settlements. Spanish sources indicate that American Indian tribes and their soldiers destroyed the forts by May 1568. A single survivor, Juan de Badejoz, described American Indian soldiers luring the Spaniards from Fort San Juan and killing all except himself. He hid in the woods and spent thirty days walking to Santa Elena, hiding by daylight and moving in darkness. Badajoz was likely spared during the attack(s) because his wife, Teresa Martin, was a American Indian woman who could have negotiated his safety.

The reason for the attacks on the Spanish forts is not known. Historians allege that Spanish aggression and disregard for American Indian

human rights were likely the causes. Spanish soldiers routinely looted American Indian towns for food. They also routinely took Native women from their villages. They imprisoned, enslaved, or married them. These behaviors likely caused the American Indian tribes to attack and destroy Spanish forts. The failure of the forts struck yet another blow to Spanish attempts to settle the greater Southeast. They made no further efforts to move into the interior. And facing poor resources and retaliating American Indian tribes, the Spanish even took apart Santa Elena and moved their capital to Saint Augustine in 1587.

None of Pardo's forts had ever been located until recently. Now archaeologists from [Warren Wilson College](#) ^[30] near [Asheville](#) ^[31], the University of Oklahoma, and Tulane University are studying the Berry site for clues to the fate of Fort San Juan. These researchers hope to find out more about how the Spanish soldiers interacted with their American Indian hosts. What is clear so far is that the arrival of the Spanish armies in the Catawba River valley changed the region's American Indian cultures forever. It is thought that many of the Native people living in this region died from European diseases such as smallpox between 1568 and 1700. What had been a heavily populated valley was mostly abandoned, until new immigrants from the northern colonies began moving into the area in the late 1700s.
