French Broad River

by Elizabeth Bayley, 2006; Revised by SLNC Government and Heritage Library, March 2024

Hairr, John. 1997. "The French Broad River near Hot Springs in Madison County."

French Broad River is formed by the junction of North Fork and West Fork in southern [Transylvania County](#) ^[2] near the town of Rosman. It flows northeast into [Henderson County](#) ^[3], where it turns northwest and courses through [Buncombe](#) ^[4] and [Madison](#) ^[5] Counties. The French Broad flows through the city of [Asheville](#) ^[6], where it picks up the Swannanoa River and continues north into Tennessee. After leaving North Carolina, the French Broad proceeds west for 102 miles, joins the Holston River to form the Tennessee River near the city of Knoxville, and eventually flows into the Mississippi River.

The Cherokee names for the French Broad River vary, but the most common was Tah-kee-os-tee, meaning "racing waters." Others, such as Peo-li-co, Agiqua, and Zillicoah, usually referred to only a part of the river. The English originally knew it as the Broad River—the way it was written on a 1766 "Map of Indian Nations in the Southern Department." By 1776, however, the word "French" had been added because much of the territory west of the Blue Ridge, where the river drained, was occupied by the French in the 1700s.

The French Broad River has a North Carolina watershed of 2,830 square miles; its total length in North Carolina is about 70 miles. For much of the twentieth century the river was environmentally threatened, but through several public and private initiatives it has recovered and become an important natural and recreational area. The river basin encompasses 24 municipalities that had a total population of about 400,000 people in the early 2000s. The French Broad is also one of the world's oldest rivers, predated, by some estimations, by rivers like the Nile and [New](#) ^[7] Rivers (the New River is also in the North Carolina mountains). It is one of the few major rivers in the continental United States to flow north. Other major rivers that flow northward include the [Bighorn River](#) ^[8] in Montana or the [Red River of the North](#) ^[9] in Minnesota.
