^[7]Ironclads were warships designed to be impervious to enemy shot and shell by virtue of their iron-armored wooden hulls. Other names for these ships include rams, armorclads, iron gophers, iron elephants, iron coffins, turtle-backs, and mud-crushers. Attempts to armor war vessels had been made during the 300 years prior to the American [Civil War](#) ^[8], but it was not until the mid-nineteenth century that steam-powered warships and the development of large-caliber rifled cannons made armoring practical and indeed necessary. The Civil War clearly demonstrated the superiority of ironclads and revolutionized naval warfare.

The Confederacy concluded in June 1861 that ironclad warships would best suit its needs. With its limited [shipbuilding](#) ^[9] capacity, the [Confederate](#) ^[10] navy found it more advantageous to build a few impregnable warships to combat the numerically superior Union navy. The first Confederate attempt was the CSS *Virginia*, a conversion of the Union frigate *Merrimack* that had been burned at Gosport Navy Yard when Union forces abandoned the Norfolk, Va., area. Although slow and able to operate only in deep water, the *Virginia* proved a resounding success. In March 1862, in Hampton Roads, Va., the brand-new ironclad set out to destroy the entire Union blockading squadron. On the first day of fighting, the *Virginia* handily dispatched two wooden Union vessels. The rest were saved from certain destruction on the second day by the appearance of the Federal ironclad *Monitor*. The two impregnable ships fought to a draw, but the *Virginia's* defeat of two wooden warships confirmed the preeminence of armorclad vessels.

Construction of a dozen or more Confederate ironclad gunboats, rams, and floating batteries was begun in North Carolina during the war. Most of them were not completed, including the [Wilmington](#) ^[6]. There would have been many more had not most of the state's larger coastal towns fallen early in the war. The paucity of Confederate records makes identifying these vessels difficult. However, four ironclad rams were commissioned and finished in North Carolina. They were the [North Carolina](#) ^[4] and [Raleigh](#) ^[5], built in [Wilmington](#) ^[11] on the [Cape Fear River](#) ^[12]; the [Neuse](#) ^[3], built at Whitehall and completed at Kinston on the [Neuse River](#) ^[13]; and the [Albemarle](#) ^[2], built at Edwards Ferry and completed at [Halifax](#) ^[14] on the [Roanoke River](#) ^[15]. Considering North Carolina's lack of maritime industries or a major prewar port, the state made a substantial contribution to the Confederate navy's ironclad fleet.

At least two ironclad floating batteries were converted from existing lightships. The Frying Pan Shoals lightship was being converted to a floating battery in the rear of [Fort Caswell](#) ^[16], near the Western Bar Inlet of the Cape Fear River, when a party from the Union ship *Mount Vernon* burned it in late December 1861. The *Arctic* was converted in 1863 and later used as a receiving ship for the Wilmington Station. In March 1863 and January 1865 the Union navy reported Confederate ironclad sightings, but there is no documentation to confirm either account.

Union ironclads were also associated with North Carolina. The USS *Monitor* sank off [Cape Hatteras](#) ^[17] on 31 Dec. 1862. The following Union ironclad vessels took part in the 24-27 Dec. 1864 and 12-15 Jan. 1865 attacks on [Fort Fisher](#) ^[18]: the single-turreted monitors *Canonicus*, *Dictator*, *Mahopac*, *Saugus*, the double-turreted monitor *Monadnock*, and the ironclad warship *New Ironsides*.

After the Civil War, there was little need for ironclad vessels. Few of the ships were seaworthy, and those only barely so.

The majority were scrapped for iron. In the late nineteenth century improvements in the steelmaking process ended the need for ironclad vessels. Rather than using a wooden hull with armor only above and a few feet below the waterline, the entire ship could be made from steel. Nonetheless, ironclads were a crucial innovation in the history of naval warfare.
